

1. Introduction

1.1 Purpose

This Software Requirements Specification (SRS) document defines the functional and non-functional requirements for **Hirely**, a web-based job and internship platform targeting undergraduate students, fresh graduates, and employers (SMEs/startups).

This document reflects the **current MVP implementation**, covering features completed across Sprint 1 and subsequent incremental extensions, including job applications, applicant tracking, and role-based workflows.

1.2 Intended Audience

This document is intended for:

- Software developers
- Testers and QA engineers
- Course instructors and evaluators
- Project stakeholders
- Future contributors to the Hirely platform

1.3 Intended Use

Hirely is intended to:

- Allow students to create profiles, upload CVs, and apply for job/internship opportunities
- Allow employers to post jobs, view applicants, and manage application status
- Provide students with visibility into their application status
- Serve as a foundation for future feature expansion (notifications, analytics, administration)

1.4 Product Scope

The current MVP scope includes:

- User registration and login
- Role-based dashboards (student and employer)
- Student profile management
- CV upload and download
- Employer job posting
- Job browsing and filtering
- Job application submission
- Employer review of applicants
- Application status management (shortlisted/rejected)
- Student application tracking

Future enhancements such as notifications, analytics, and administration are out of scope for the MVP.

1.5 Definitions and Acronyms

Term	Definition
MVP	Minimum Viable Product
FR	Functional Requirement
NFR	Non-Functional Requirement
JWT	JSON Web Token
SME	Small and Medium Enterprise
Sprint	Time-boxed Scrum iteration

2. Overall Description

2.1 User Needs

- **Students** need a simple way to build profiles, upload CVs, apply for jobs, and track application status.
- **Employers** need a lightweight interface to post jobs, view applicants, and manage hiring decisions.
- **Administrators (future)** need visibility and control over platform activity.

2.2 Assumptions and Dependencies

- Users have access to modern web browsers.
- Authentication is simplified for MVP purposes.
- Backend APIs persist data using file-based JSON storage.
- Uploaded files are stored locally and served via HTTP.
- Internet connectivity is required.

3. System Features and Requirements

3.1 Functional Requirements

3.1.1 Numbered Functional Requirements

- **FR-1: User Registration**
The system shall allow students and employers to register accounts.
- **FR-2: Secure Login**
The system shall allow registered users to log in and access role-specific dashboards.
- **FR-3: Profile Management**
The system shall allow students to add and update education, skills, and projects.
- **FR-4: CV Upload**
The system shall allow students to upload a CV file.
- **FR-5: Job Listings**
The system shall allow students to view available job listings.

- **FR-6: Job Filtering**
The system shall allow users to filter job listings by criteria.
- **FR-7: Apply for Job**
The system shall allow students to apply for job postings.
- **FR-8: View Applicants**
The system shall allow employers to view applicants for their job postings.
- **FR-9: Employer Registration**
The system shall allow employers to create company accounts.
- **FR-10: Post Job**
The system shall allow employers to post job listings.
- **FR-11: Manage Application Status**
The system shall allow employers to shortlist or reject applicants.
- **FR-12: Track Applications**
The system shall allow students to view their submitted applications and track status.
- **FR-13: Download CV**
The system shall allow employers to download applicant CVs.

3.1.2 EARS Format Requirements

- When a new user submits valid registration details, the system shall create an account.
- When a user enters valid login credentials, the system shall redirect the user to the appropriate dashboard.
- When a student updates profile information, the system shall save and display the updated data.
- When a student applies for a job, the system shall create a persistent application record.
- When an employer updates an application status, the system shall reflect the change immediately.

3.2 Non-Functional Requirements

3.2.1 Performance

- 95% of page requests shall load in under 2 seconds under normal conditions.

3.2.2 Security

- Only authenticated users can access dashboards.
- Role-based access shall restrict student and employer actions.

3.2.3 Usability, Reliability, Compliance

- The system shall be usable on modern browsers.
- The UI shall be responsive.
- Errors shall be clearly communicated to users.

3.3 External Interface Requirements

3.3.1 Performance Requirements

- REST APIs shall respond within acceptable latency for MVP-level data sizes.

3.3.2 Safety Requirements

- No safety-critical operations are involved.

3.3.3 Security Requirements

- Simplified authentication is used; production-grade security is deferred.

3.3.4 Software Quality Attributes

- Maintainability through modular frontend/backend separation.
- Scalability through clearly defined API boundaries.

3.3.5 Business Rules

- Students cannot post jobs.
- Employers cannot apply for jobs.
- Jobs must be posted by authenticated employers.
- Employers can only manage applications related to their jobs.

4. Other Requirements

4.1 Database Requirements

- The MVP uses file-based JSON storage for users, jobs, and applications.

4.2 Legal and Regulatory Requirements

- No personal data is persisted permanently beyond the MVP scope.

4.3 Internationalization and Localization

- MVP language: English
- Localization is not implemented.

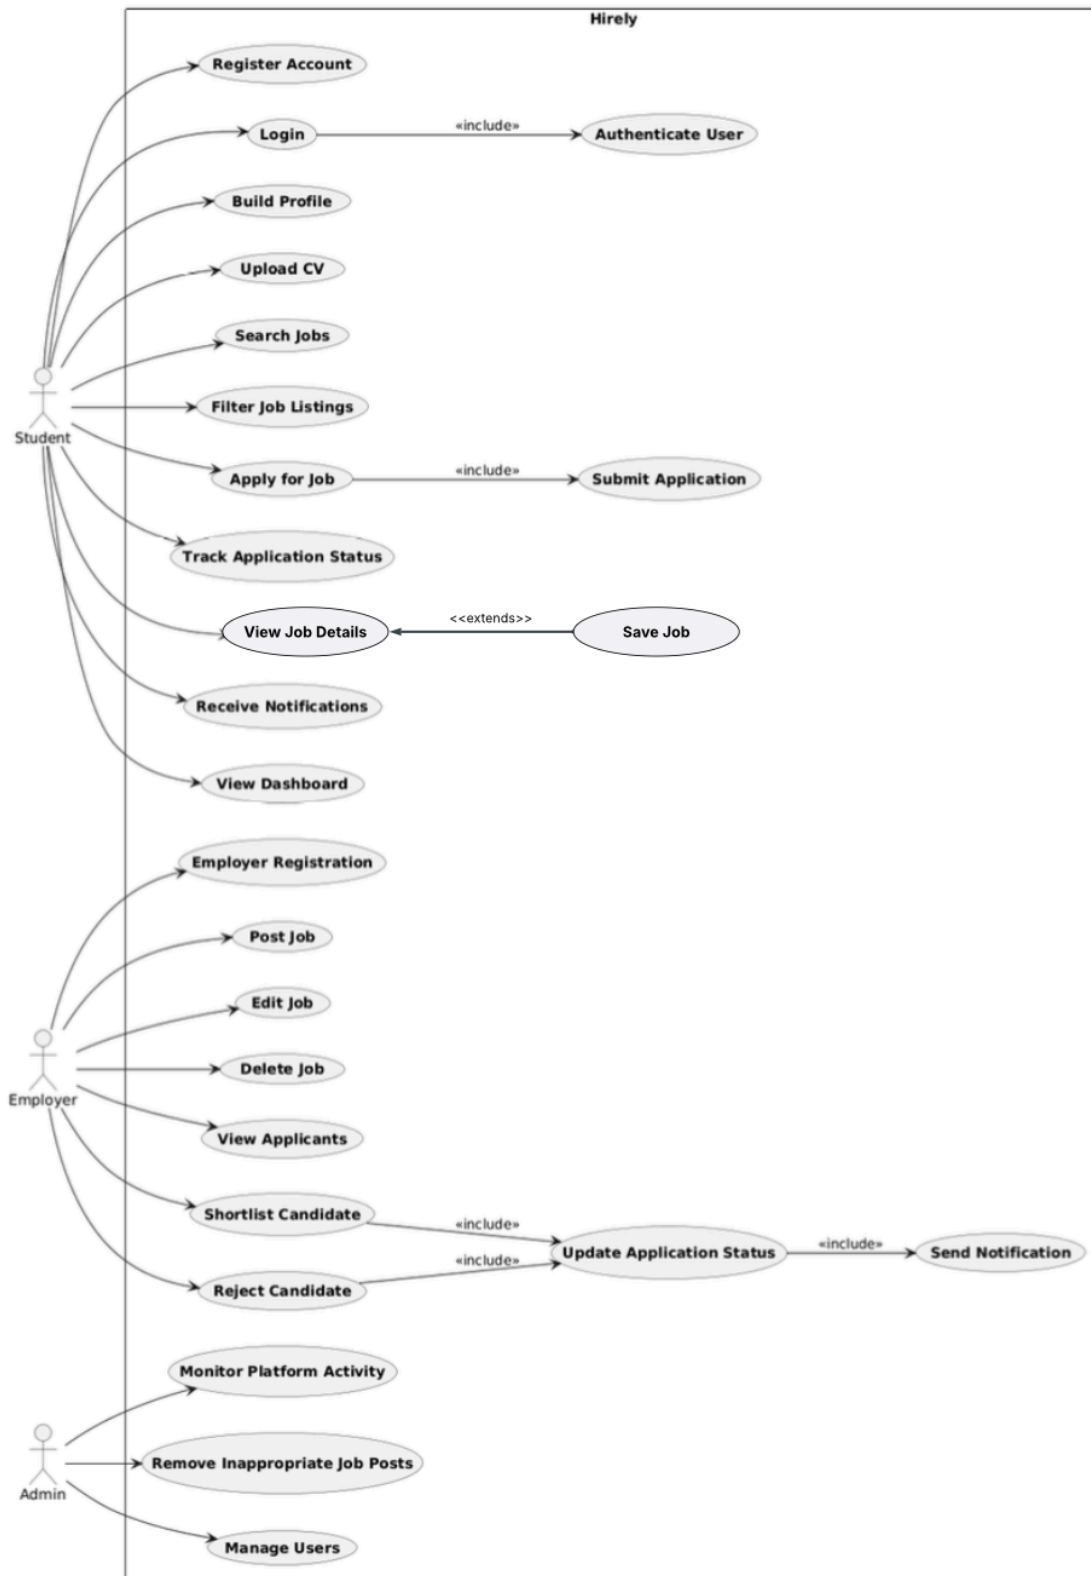

4.4 Risk Management (FMEA Summary)

Risk	Impact	Probability	Mitigation
Scope creep	High	Medium	Sprint scope lock
Auth complexity	High	Medium	Simplified auth
Data inconsistency	Medium	Low	Centralized JSON store
Time constraints	High	High	

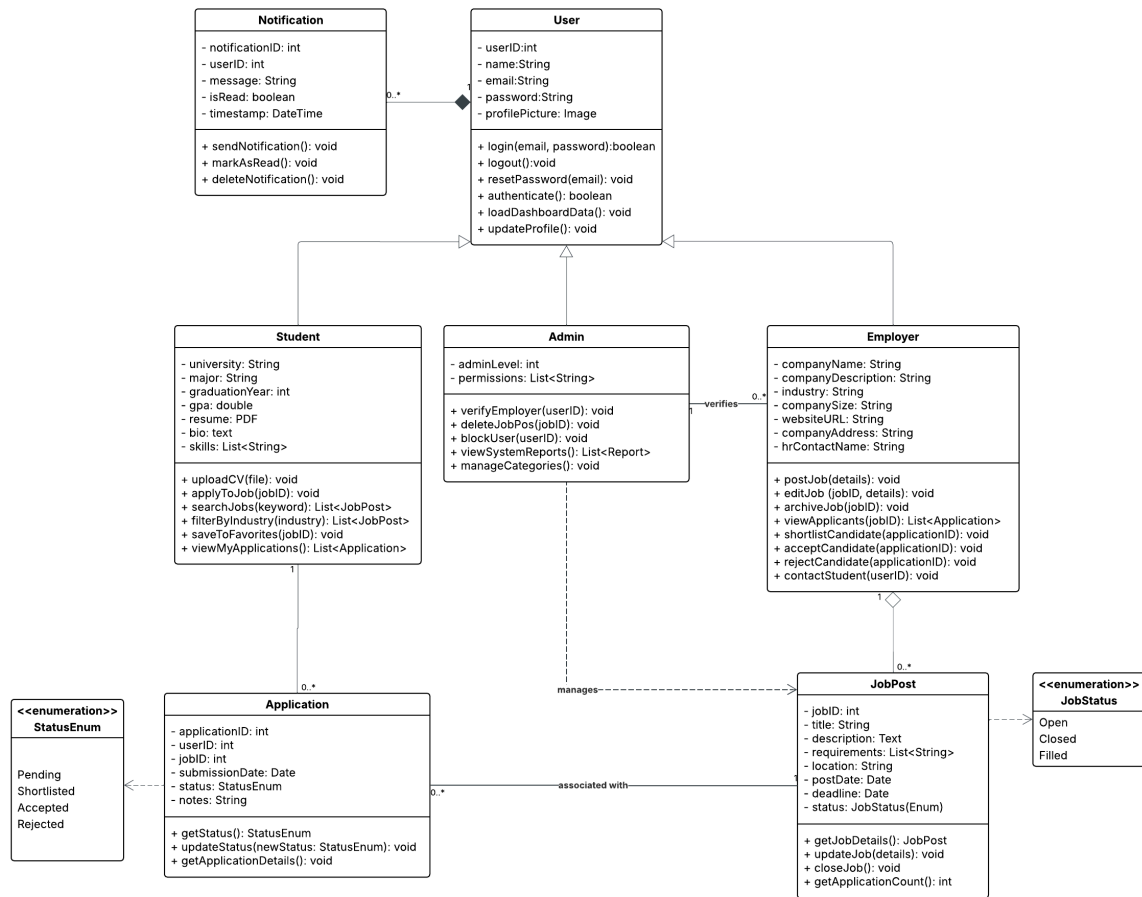

5. Appendices

5.1 Glossary

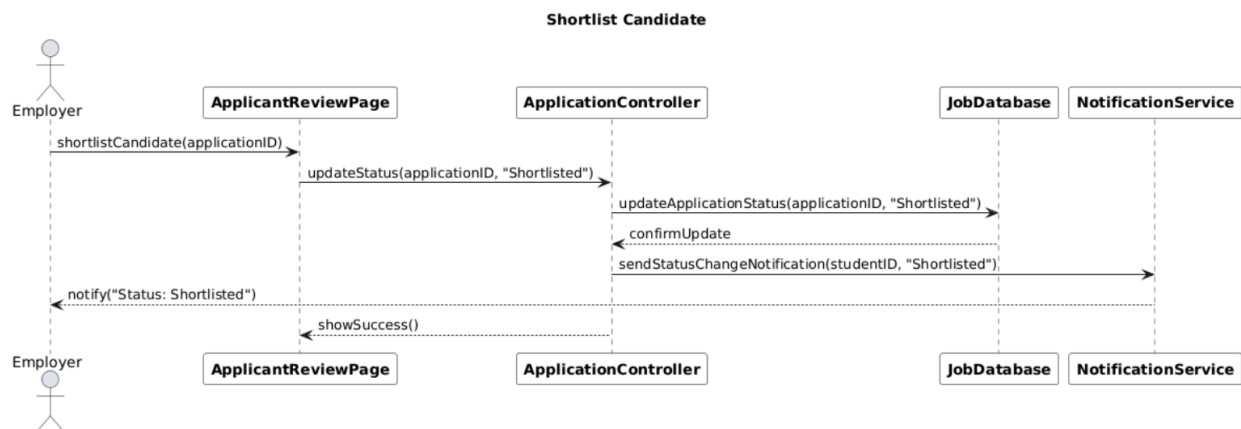

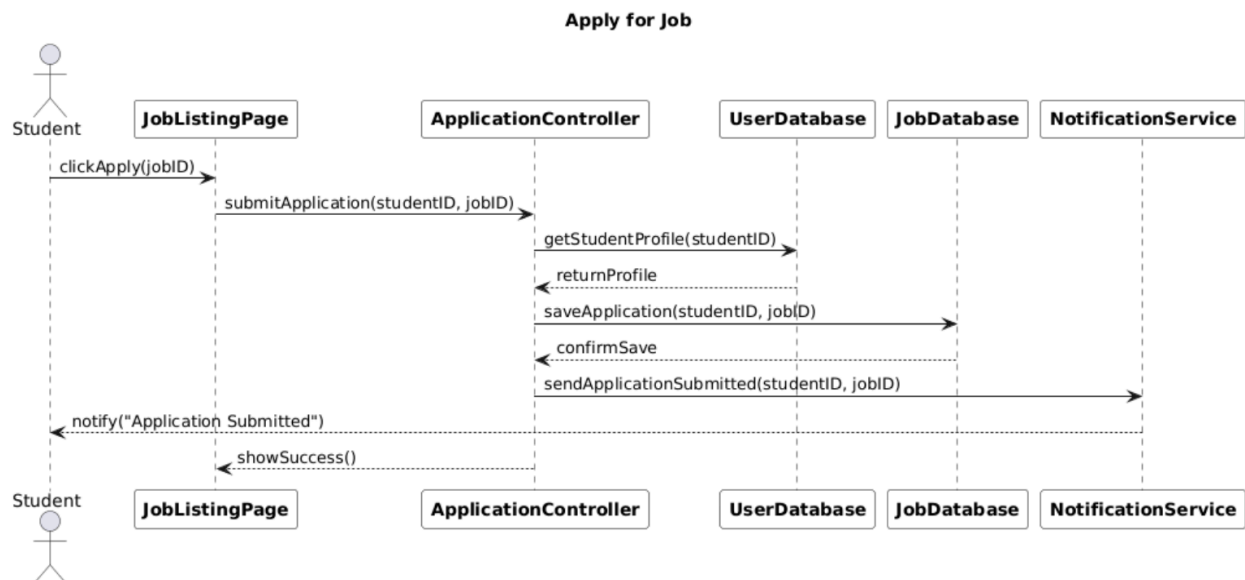

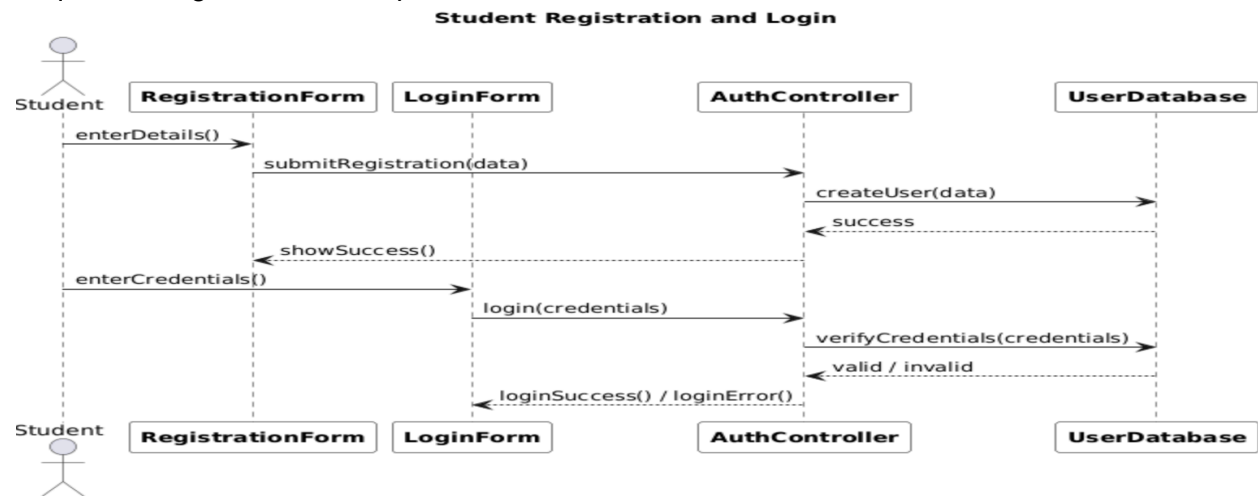

5.2 Use Cases and Diagrams

Class diagram

Sequence diagrams for the top 3 features

5.3 To Be Determined (TBD) List

- Notifications

- Admin moderation
- Database migration
- Analytics and reporting
